**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

# Office Action Summary

**Application No.**

10/581,285

**Applicant(s)**

IWANAGA ET AL.

**Examiner**

LUKE E. KARPINSKI

**Art Unit**

1616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 October 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1 and 3 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1 and 3 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/22)
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date: \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_
- Paper No(s)/Mail Date: \_\_\_\_\_

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/29/2010 has been entered.

### ***Claims***

Claims 2 and 4-6 are canceled.

Claim 1 is amended.

Claims 1 and 3 are pending and under consideration in this action.

### ***Rejections***

Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Applicant Claims
2. Determining the scope and contents of the prior art.
3. Ascertaining the differences between the prior art and the claims at issue, and resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**1. Claims 1 and 3 are rejected under 35 U.S.C. 103(a)** as being unpatentable over US Patent 5,466,719 to Jakobson et al. in view of JP-2001-025654 utilizing the enclosed translation, herein referred to as JP'654, and USPN 5,399,357 to Akiyama et al.

***Applicant Claims***

Applicant claims a cleansing cosmetic comprising a fatty acid ester, a non-ionic surfactant, and an oil agent present at 10-99.8%, wherein said ester is formed from a fatty acid having 6-10 carbon atoms and a polyglycerol selected from pentadecaglycerol and eicosaglycerol and wherein said composition can form a W/O emulsion when contacted with water.

Applicant also claims 0-80% water.

***Determination of the Scope and Content of the Prior Art***  
***(MPEP §2141.01)***

Jakobson et al. teach cleansing compositions (col. 10, lines 44-50) comprising mixtures of polyglycerol fatty acid esters made through the reaction of polyglycerols having a degree of polymerization of 2-8 and fatty acids having 6-14 carbon atoms (abstract) and oils showing a liquid or pasty state at 25 degrees (col. 6, lines 21-55) and said oils present at 10-60% (col. 5, lines 11-12), as pertaining to claim 1.

Jacobson et al. further teach 0-70% water (col. 5, line 13), as pertaining to claim

***Ascertainment of the differences between the prior art and the claims***  
***(MPEP 2141.01)***

Jakobson et al. do not teach an average degree of polymerization from 15-50. This deficiency is cured by JP'654. JP'654 teaches cleansing compositions comprising a polyglycerol fatty acid ester with an average degree of polymerization of 2-16 [11].

Neither Jakobson et al. nor JP'654 teach pentadecaglycerol or eicosaglycerol. This deficiency is cured by Akiyama et al. Akiyama et al. teach that pentadecaglycerol and eicosaglycerol are polyglycerols known to be used in the formation of fatty acid ester glycerols (col. 2, lines 44-66).

***Finding of prima facie Obviousness Rational and Motivation***

Regarding claim 1, it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to produce the formulations of Jakobson et al. with polyglycerol fatty acid esters having an average degree of polymerization of 2-16 as taught by JP'654 in order to produce the invention of instant claim 1.

One of ordinary skill in the art would have been motivated to do this because Jakobson and JP'654 both teach cleansing compositions comprising polyglycerol fatty acid esters and teach overlapping ranges of degrees of polymerization. Therefore it would have been obvious to utilize the polyglycerol fatty acid esters of JP'654, in the formulations of Jakobson et al. in order to use polyglycerol fatty acid esters known to be useful in cleansing compositions.

Regarding the specific polyglycerols claimed, it would have been obvious to one of ordinary skill in the art to use either pentadecaglycerol or eicosaglycerol to form said polyglycerol fatty acid esters of Jakobson et al. and JP'654 in order to produce the formulations of claim 1.

One of ordinary skill in the art would have been motivated to do this because Jakobson and JP'654 both teach cleansing compositions comprising polyglycerol fatty acid esters, JP'654 teach polyglycerins with a degree of polymerization of 2-16 and Akiyama et al. teach that using either pentadecaglycerol or eicosaglycerol to form polyglycerol fatty acid esters was known. Therefore it would have been obvious to utilize pentadecaglycerol or eicosaglycerol to form said polyglycerol fatty acid esters of JP'654, and use these in the formulations of Jakobson et al. in order to produce polyglycerol fatty acid esters with known components to form compounds known to be useful in cleansing compositions.

From the teachings of the reference, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

**2. Claims 1 and 3 are rejected under 35 U.S.C. 103(a)** as being unpatentable over JP-2003-012456 utilizing the enclosed translation, hereafter referred to as JP-456,

in view of USPN 5,466,719 to Jakobson et al., USPN 5,399,357 to Akiyama et al., and JP-2001-025654 (JP-654).

### ***Applicant Claims***

Applicant claims are delineated above and incorporated herein.

### ***Determination of the Scope and Content of the Prior Art***

#### ***(MPEP §2141.01)***

JP-456 teaches cleansing creams [1] comprising polyglycerol fatty acid esters [4], comprising polyglycerin with a degree of polymerization of three or more and fatty acids having 8-22 carbon atoms [6], and oils showing a liquid or pasty state at 25 degrees [12], as pertaining to claim 1.

JP-456 further teaches water and oils emulsions, which reads on claims 1 and 3 [1].

### ***Ascertainment of the differences between the prior art and the claims***

#### ***(MPEP 2141.01)***

JP-456 does not teach percentages of oil or water present. This deficiency is cured by Jakobson et al. Jakobson et al. teach cleansing formulations comprising 0-70% water and 10-60% oil (col. 5, lines 9-15), as pertaining to claims 1 and 3.

Neither JP-456 nor Jakobson et al. teach pentadecaglycerol or eicosaglycerol. This deficiency is cured by Akiyama et al. Akiyama et al. teach that pentadecaglycerol

and eicosaglycerol are polyglycerols known to be used in the formation of fatty acid ester glycerols (col. 2, lines 44-66).

Neither JP-456 nor Jakobson et al. teach W/O emulsions. This deficiency is cured by JP-654. JP-654 teaches that compositions comprising the same components as claimed and as taught by the combination of JP-456 and Jakobson et al. may be formulated into either a W/O or O/W emulsion as desired and one of skill would have known how to do this at the time of the instant invention ([2], [7], and [15]).

***Finding of prima facie Obviousness Rational and Motivation***  
***(MPEP 2142-2143)***

Regarding claims 1 and 3, it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to produce the formulations of JP'456 with 10-60% oil and 0-70% water as taught by Jakobson et al. in order to produce the invention of instant claims 1 and 3.

One of ordinary skill in the art would have been motivated to do this because Jakobson and JP'456 both teach cleansing compositions comprising oil and water and Jakobson et al. teach specific percentages of said components to use. Therefore it would have been obvious to utilize the oil and water percentages of Jakobson et al. in the formulations of JP'456 in order to use produce cleansing compositions with known amounts of water and oil.

Regarding the specific polyglycerols claimed, it would have been obvious to one of ordinary skill in the art to use either pentadecaglycerol or eicosaglycerol to form said

polyglycerol fatty acid esters of Jakobson et al. and JP'456 in order to produce the formulations of claim 1.

One of ordinary skill in the art would have been motivated to do this because Jakobson and JP'456 both teach cleansing compositions comprising polyglycerol fatty acid esters, JP'456 teach polyglycerins with a degree of polymerization of 3 or more and Akiyama et al. teach that using either pentadecaglycerol or eicosaglycerol to form polyglycerol fatty acid esters was known. Therefore it would have been obvious to utilize pentadecaglycerol or eicosaglycerol to form said polyglycerol fatty acid esters of JP'456, and use these in the formulations of Jakobson et al. in order to produce polyglycerol fatty acid esters with known components to form compounds known to be useful in cleansing compositions.

Regarding the limitation to a W/O emulsion, it would have been obvious to one of ordinary skill in the art to formulate said compositions into W/O emulsions as well as O/W emulsions in order to produce the formulations of claim 1.

One of ordinary skill would have been motivated to do this because the combination of JP-456 and Jakobson et al. teach the same components and percentages thereof as claimed in an O/W form and JP-654 teaches that compositions comprising the same components may be formulated into either an O/W or W/O form as desired. Therefore it would have been obvious to alter the O/W emulsions of the JP-456 and Jakobson et al. combination to W/O formulations as described by JP-654 in order to produce a formulation with the desired properties and feel of a W/O emulsion.

From the teachings of the reference, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

**3. Claims 1 and 3 are rejected under 35 U.S.C. 103(a)** as being unpatentable over JP-2001-025654 utilizing the enclosed translation, herein referred to as JP'654 in view of USPN 5,399,357 to Akiyama et al.

### ***Applicant Claims***

Applicant claims are delineated above and incorporated herein.

### ***Determination of the Scope and Content of the Prior Art*** ***(MPEP §2141.01)***

JP'654 teaches cleansing compositions comprising polyglycerol fatty acid esters [1], comprising fatty acids with 8-24 carbons [8], a degree of polymerization of 2-16 [11], and oils showing a liquid or pasty state at 25 degrees [13], as pertaining to claim 1.

JP'654 further teaches water and oil mixtures of 1-50% of said compositions, which reads on about 1-50% of water and about 1-50% oil [15], as pertaining to claims 1 and 3.

***Ascertainment of the differences between the prior art and the claims***

***(MPEP 2141.01)***

JP'654 does not teach pentadecaglycerol or eicosaglycerol. This deficiency is cured by Akiyama et al. Akiyama et al. teach that pentadecaglycerol and eicosaglycerol are polyglycerols known to be used in the formation of fatty acid ester glycerols (col. 2, lines 44-66).

***Finding of prima facie Obviousness Rational and Motivation***

***(MPEP 2142-2143)***

Regarding the specific polyglycerols claimed, it would have been obvious to one of ordinary skill in the art to use either pentadecaglycerol or eicosaglycerol to form said polyglycerol fatty acid esters of JP'654 in order to produce the formulations of claim 1.

One of ordinary skill in the art would have been motivated to do this because JP'654 teaches cleansing compositions comprising polyglycerol fatty acid esters, JP'654 teach polyglycerins with a degree of polymerization of 2-16 and Akiyama et al. teach that using either pentadecaglycerol or eicosaglycerol to form polyglycerol fatty acid esters was known. Therefore it would have been obvious to utilize pentadecaglycerol or eicosaglycerol to form said polyglycerol fatty acid esters of JP'654, and use these in order to produce polyglycerol fatty acid esters with known components to form compounds known to be useful in cleansing compositions.

From the teachings of the reference, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed

invention. Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1 and 3 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues that Jakobson et al. does not teach the claimed average degree of polymerization. This argument is not found persuasive because this deficiency in Jakobson et al. is cured by JP-654.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

### ***Conclusion***

Claims 1 and 3 are rejected.

No claims are allowed.

### ***Inquiries***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LUKE E. KARPINSKI whose telephone number is (571)270-3501. The examiner can normally be reached on Monday Friday 9-5 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann R. Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
